Design a Robotic Companion

#english

#descriptivewriting

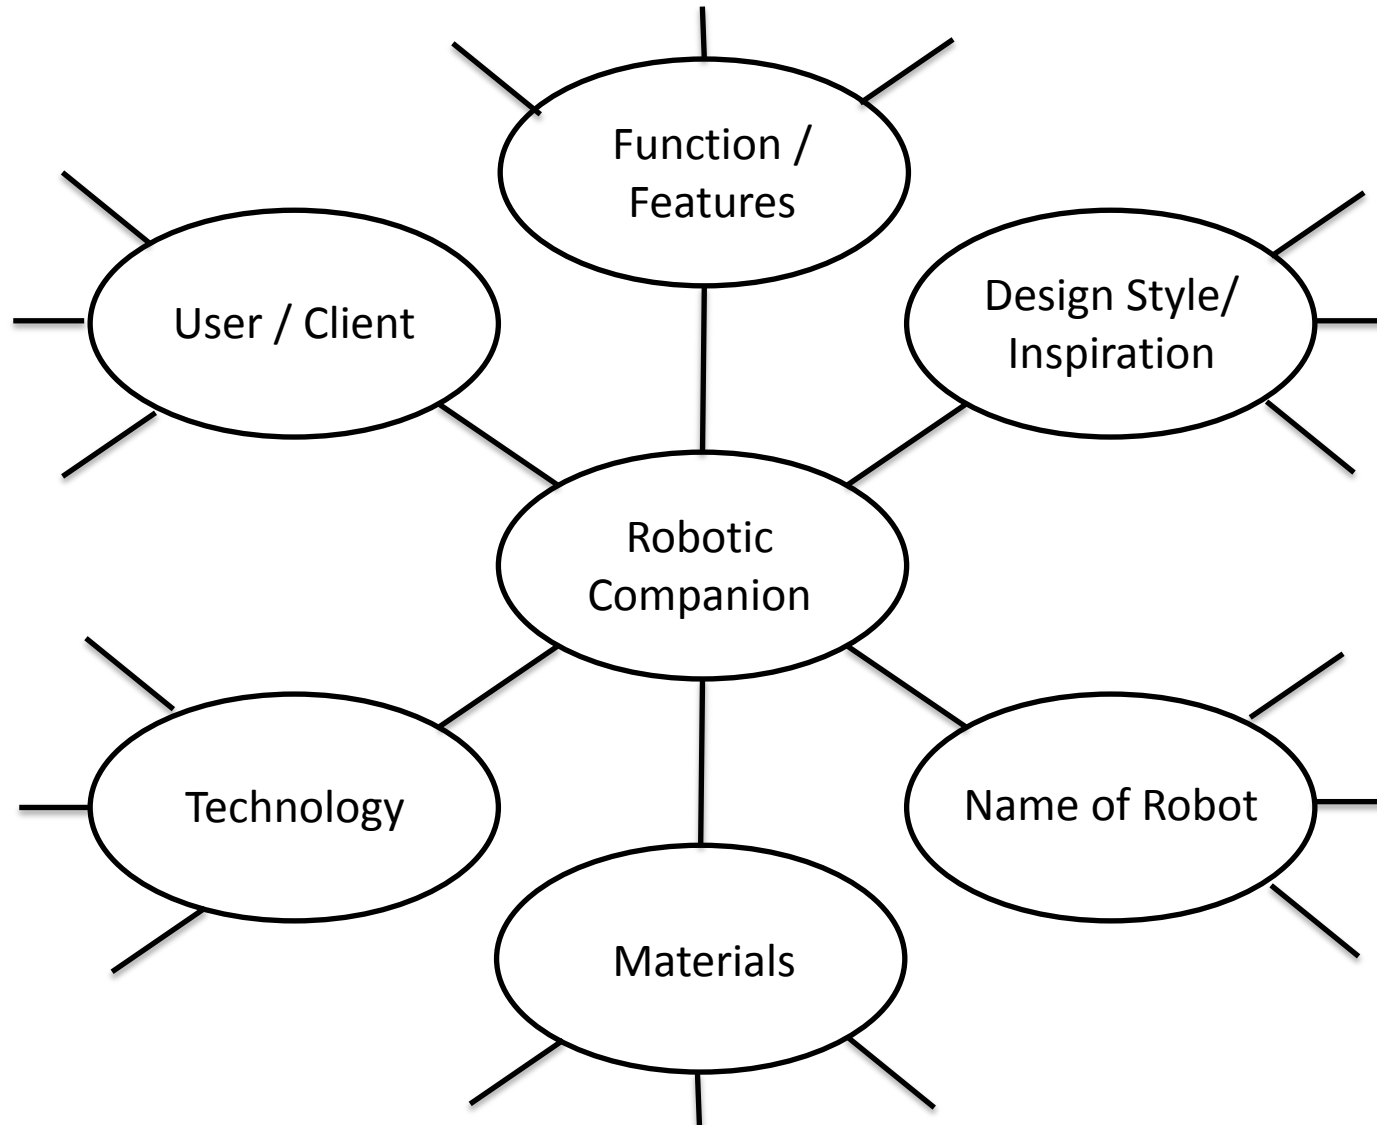

Robots are now everywhere in the media and are becoming more of a reality in our everyday lives. Very soon robots will be more than practical machines, they will become our companions.

You are to write a design brief that will be used by another student to design your ideal robotic companion.

Design briefs are short documents that explain very clearly the key factors required in a successful design. They are written in very factual and formal language, but they are open enough to allow the designer to be creative.

Brainstorm the key factors for your ideal robotic companion.

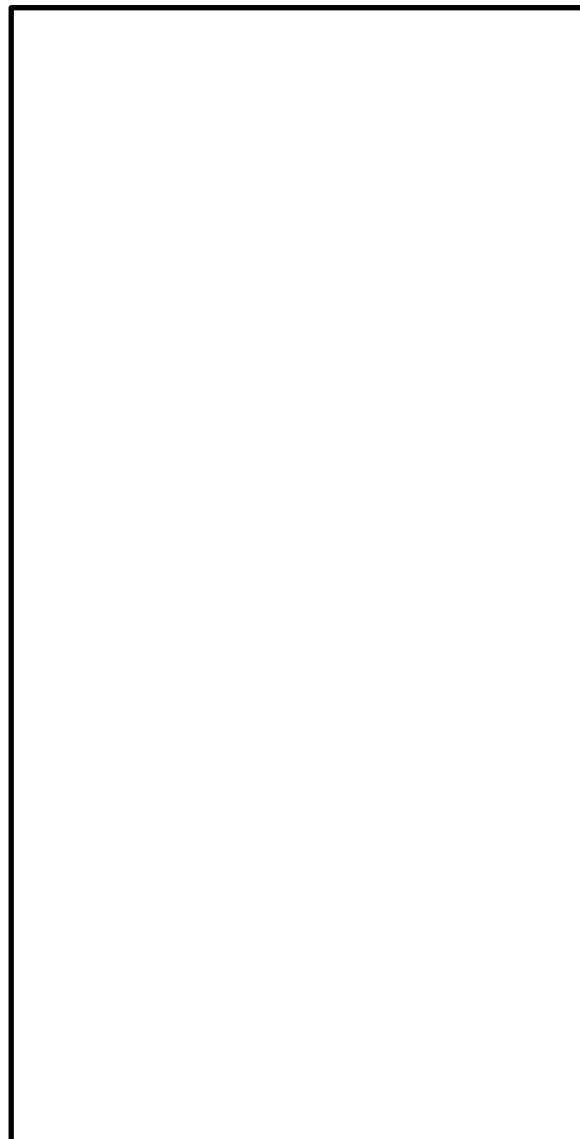

Design Brief

My ideal robotic companion should . . .

Name of Robot:
